NASA's first asteroid samples land on Earth

NASA's first asteroid samples fetched from deep space parachuted into the Utah desert on Sunday to cap a seven-year journey. In a flyby of Earth, the Osiris-Rex spacecraft released the sample capsule from 100,000 km out. The small capsule landed four hours later on a remote expanse of military land, as the mothership set off after another asteroid. Scientists estimate the capsule holds at least a cup of rubble from the carbon-rich asteroid known as Bennu | P11
